

Can-Am Engine Prep for Pick-Up

Please prepare your engine as follows,

REMOVE THE FOLLOWING FROM YOUR ENGINE.

- Intake boots
- Clutches & Drive Belt Assembly
- Exhaust manifold
- Sensors
- Throttle body or carb
- Plastic covers
- Oil Filters, Spark Plugs, Oil Coolers
- Rubber hoses

You can leave the stator, stator cover, flywheel and starter on the engine and we will swap them over to the new engine. (Please note, we will swap these components over for you but they are NOT covered in the remanufacture process).

All fluids need to be drained for shipment. Once the engine is pulled it needs to be put in a small container (box or plastic tote) and strapped to a skid/pallet for pickup. We can pick up the engine from a business or residential setting. Call us when your engine is ready for pick-up and we will send you a call-tag via email and schedule a pick-up when you are ready.
